

UNITED STATES DISTRICT COURT  
SOUTHERN DISTRICT OF NEW YORK

UNITED STATES OF AMERICA,

-v-

ALFRED LAFORD,

Defendant.

11 Cr. 1032-07 (PAE)

ORDER

PAUL A. ENGELMAYER, District Judge:

The Court has received the attached letter from the mother of defendant Alfred Laford, addressing the conditions of Mr. Laford's confinement. The Court asks Mr. Laford's trial counsel, Telesforo Del Valle, Esq., to investigate these concerns and to notify the Court, by letter due March 12, 2021, whether Mr. Laford seeks any relief within this Court's competence.

SO ORDERED.

  
\_\_\_\_\_  
PAUL A. ENGELMAYER  
United States District Judge

Dated: February 18, 2021  
New York, New York

**11-CR-1032-07 D&F**

**MOTION FOR RECONSIDERATION - COMPASSIONATE**  
**RELEASE 3582 C1A**

**CASE NUMBER: 1:11-cr-01032**

**ALFRED LAFORD**  
**VS.**  
**UNITED STATES OF AMERICA**

Honorable Judge,

I hope all is well with you! The reason for these lines is to ask for a reconsideration for the compassionate release motion for my son Alfred Laford, please forgive me for the audacity to write to you directly but my son is currently at Marquette Branch Prison in Marquette, Michigan. The state facility was built in 1889 meaning it is very old and in bad condition for any human being. My son along with other inmates are only permitted showers for approximately 5 minutes for several days a week. When the COVID-19 outbreak hit the facility during October 2020, 799 inmates and 250+ staff members were tested positive (Article Attached Printed & Link - <https://www.google.com/amp/s/amp.freep.com/amp/5990001002> )

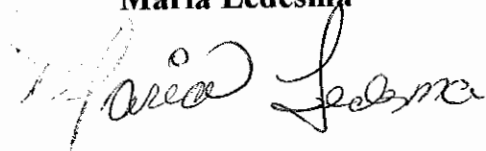

How did COVID-19 spread so rapidly? The facility places the inmates right next to each other in open bar cells. Any disease or infection from another inmate will easily pass down to the other. During these tough times, there were barely staff looking over or attending to the inmates in my son's facility. This matter left the inmates in charge of passing out lunch, those same inmates who tested positive. My son, Alfred Laford tested positive for COVID-19 in October 2020 and he has faced and is still facing a series of trauma because of his illness, pain, and suffering. Out of everyone infected in the prison, Alfred was one of the very few individuals rushed to the hospital to be treated for several weeks. While he was hospitalized twice, he was diagnosed with COVID-19 Pneumonia in his lungs and had to be treated with antibody therapy from Regeneron after convalescent PLASMA in order to get better along with receiving oxygen 24/7 for a few weeks. The COVID-19 was close to killing my son because he suffers from lung diseases like Asthma and Sleep Apnea, and on that list... added were heart problems and Tachycardia as a result of COVID-19. His heart rate is so accelerated that he can catch a heart attack or stroke, your honor. (Hospital records printed attached to this letter), (We are still waiting on the facility to send us the second hospitalization's records, as soon as we get the papers, we will send them to you). When my son, Alfred Laford had to be rushed to the hospital, he was so sick that he had to be rushed out in stretchers in an ambulance because he couldn't breathe, walk, eat, or drink. My son's health has worsened after this situation. When he was discharged, the hospital obligated the facility to have Alfred take medicine for his heart rate to progress in a positive way but the treatment is not benefiting him at all. His heart is still very accelerated. A few days ago, my son communicated to

me that the rate of prisoners in the facility he's in are being tested for COVID-19 again including himself and so far 14 people have been infected again. The numbers are rising, and I do not want my son to get infected again with the 2nd string of the COVID-19. The first time he tested positive, he was very close to dying because his lungs collapsed and he had to receive oxygen 24/7. This time, I cannot imagine how hard it would impact his health. I beg, and implore to take this letter into consideration and help me from a desperate mother.

Please, sir, I beg you to take on this matter, I miss my son. It has been 9 years, almost a decade. There has been so much lost time together. I am my son's world and he is mine! I know he committed mistakes but I am 100% sure, he has regretted the past incidents and has taken accountability. Mr. Engelmayer, he has matured and is ready to be back home with his family. Family is everything to Alfred. I would love for you to take my words into consideration. I know though, if he can at least get home confinement, I will be able to care and help my son. If you decide that this letter is not an appropriate result for that action then please make a recommendation so he can be removed from that state facility he is located in to a federal facility with better health care (He isn't supposed to be in a state facility because he does not owe the state incarceration system any time, he is supposed to be in federal custody). Again, your honor please grant my son this opportunity. Thank you in advance.

Sincerely,

Maria Ledesma

A handwritten signature in dark ink, appearing to read 'Maria Ledesma', written in a cursive style.

SUBJECT: Request for Health Record Information

DATE: 10/5/2020

Your request for ☒ copies ☐ review of your health record has been received.

This request is not being processed under the Freedom of Information Act (MCL 15.231 et seq.) because health records are not public documents. It is being processed under the Medical Records Access Act (MCL 333.26261 et seq.).

A. ☐ Your request can be processed after completion of the following steps:

- ☐ Complete the attached authorization form, stating specifically what information you are requesting.
- ☐ Forward a completed disbursement voucher, in the amount of \$ \_\_\_\_\_  
( \_\_\_\_\_ pages x \$.25 per page).
- ☐ Submit a check or money order for the amount of \$ \_\_\_\_\_ ( \_\_\_\_\_ pages)

*An initial fee of \$24.48 per request for a copy of the record.*

*One dollar twenty two cents (\$1.22) per page for the first 20 pages.*

*Sixty one cents (\$.61) per page for pages 21 through 50.*

*Twenty four cents (\$.24) per page for pages 51 and over.*

Make check or money order payable to STATE OF MICHIGAN. Send payment to:

\_\_\_\_\_, Attn: Medical Records  
Facility Name

B. ☐ Your request cannot be processed for the following reason(s):

- ☐ Review of health records is not permitted. You may obtain copies of your health record by submitting a health care request stating specifically what records you are requesting.
- ☐ The information you have requested is not contained within your health record.
- ☐ A more precise description of the information you are requesting is needed. Please describe the information you want in greater detail.
- ☐ Other: \_\_\_\_\_

C. ☐ Your request has been forwarded to Duane L. Waters Hospital, 3857 Cooper St., Jackson, MI 49201.

D. ☒ Enclosed are the health record copies you requested ( 58 pages enclosed).

E. ☐ Other: \_\_\_\_\_

Date of Birth: 04/01/1990	Sex: M	Facility: MBP
Note Date: 10/12/2020 16:18	Provider: Kocha, Joshua [JK7] PA	Unit: B

COVID-19 encounter performed at Clinic.

### Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Kocha, Joshua [JK7] PA

Pt tested positive for covid 19 and was seen cell side. He states his lungs hurt and he has a cough. He notes fever, chills, and diarrhea.

Pt appears in his stated health. He does not appear acutely ill or toxic. His breathing is easy and non labored. He did not cough during our interview. His lips are not dry or cracked. He easily converses in a normal tone of voice. He does not show outward signs of dizziness when standing.

Questions solicited and answered. We discussed symptomatic management, monitoring, and for him to report any changes to medical. He agrees to assure he is drinking enough water.

Test Name	Lab	Collection Date	Results Date
	Result	Reference Range	
COMMENTS:			
SARS COV 2 RNA, RT PCR (COVID 19) {COV19}		10/09/2020 00:00	10/11/2020 00:50
SARS COV 2 RNA, RT PCR	POSITIVE (A)	NEGATIVE	

THESE RESULTS ARE FOR THE DETECTION OF SARS-COV-2 RNA. DETECTED RESULTS ARE INDICATIVE OF THE PRESENCE OF SARS-COV-2 RNA. CLINICAL CORRELATION WITH PATIENT HISTORY AND OTHER DIAGNOSTIC INFORMATION IS NECESSARY TO DETERMINE PATIENT INFECTION STATUS. POSITIVE RESULTS DO NOT RULE OUT BACTERIAL INFECTION OR CO-INFECTION WITH OTHER VIRUSES. NEGATIVE RESULTS DO NOT PRECLUDE SARS-COV-2 INFECTION AND SHOULD NOT BE USED AS THE SOLE BASIS FOR PATIENT MANAGEMENT DECISIONS. NEGATIVE RESULTS MUST BE COMBINED WITH CLINICAL OBSERVATIONS, PATIENT HISTORY AND EPIDEMIOLOGICAL INFORMATION. IMPROPER SPECIMEN COLLECTION CAN RESULT IN POSSIBLE FALSE NEGATIVE RESULTS.

===== PHYSICAL EXAM:

VITAL SIGNS: vital signs reviewed. hypoxia, febrile, tachycardia.

GENERAL APPEARANCE: well nourished, alert, cooperative, mild-moderate discomfort.

MENTAL STATUS: speech clear, oriented X3, normal affect, responds appropriately to questions.

NEURO. motor strength - 5/5 bilateral, cranial nerves 3 - 12 intact, normal gait.

EYES: PERRL, EOMI, conjunctiva clear.

NOSE: no nasal discharge.

MOUTH: (-)decreased moisture.

THROAT: no tonsillar inflammation, no airway obstruction.

NECK: supple, no neck tenderness, (-)thyromegaly.

BACK: (-) bilateral costovertebral tenderness.

CHEST WALL: no chest tenderness

HEART: rate 120, regular rhythm, normal S1, normal S2, no murmur, no rub.

LUNGS: no wheezing, no rales, no rhonchi, (-)accessory muscle use, fair air exchange bilateral.

ABDOMEN: normal BS, soft, no abd tenderness, (-)guarding, (-)rebound, no organomegaly, no abd masses.

EXTREMITIES: good pulses in all extremities. no swelling/tenderness in the extremities, no edema.

SKIN: warm, dry, good color, no rash.

===== RESULTS REVIEWED:

===== MD NOTE:

===== MDM: After initial evaluation initial impression (Ddx) includes: Clinical Impression: 1. Covid-19 with SOB and hypoxic respiratory failure. Will get CBC and CXR to screen for pneumonia. 2. Asthma. Will give Albuterol 2 puffs + Decadron 16mg IV.

## HOSPITALIST ADMISSION HISTORY AND PHYSICAL EXAMINATION

Primary care physician: With the prison system

Code status: Full code

Chief complaint: Dyspnea

HPI: 30-year-old prisoner with past medical history of asthma presented to the emergency room today with complaints of shortness of breath. He has been having cough, congestion, fever, chills, loss of smell, loss of taste for the last one week and he tested positive for COVID-19 five days ago. About two days ago, he started having insidious onset of shortness of breath that has been getting progressively worse. Dyspnea is worse with exertion. He has associated cough that is nonproductive. He has body aches. He has been having nausea without vomiting. His appetite has been extremely poor. He also reports diarrhea. Upon arrival to the ED, he was noted to have low-grade fever of 100.1. His heart rate was 130. He was hypoxic 84% on room air but his oxygenation improved to 96% on 4 liters. His blood work showed mildly elevated troponin, mild hyponatremia, mild hyperglycemia. His chest x-ray showed bibasilar opacity. Hospitalist service was contacted for admission.

Patient denies any headache. No abdominal pain. He reports pleuritic chest pain. No lower extremity edema. No urinary complaints.

-He does not smoke. No alcohol abuse. No illicit drug abuse. He has been in prison since 2011. He is ordinarily from Dominican Republic.

## Family history:

-positive for diabetes, heart disease and hypertension in his mother. He reports asthma in multiple family members.

Review of systems: No hemoptysis. No hematemesis. No melena. A complete system review was obtained, negative except as detailed elsewhere.

## Physical examination:

Vital signs: BP: 122/71 PR: 109 RR: 18 Temperature: 100.1 O2 saturation: 84% on room air

General appearance: Awake and alert. No acute distress.

HEENT: No pallor, no jaundice. No facial asymmetry. Moist tongue and buccal mucosa. No pharyngeal erythema or exudates. No thyromegaly. No cervical lymphadenopathy. Trachea is located centrally.

Chest: No chest wall deformity. No chest wall tenderness. Lungs are clear to auscultation bilaterally. Lungs are resonant to percussion bilaterally.

Cardiovascular: S1 and S2 are regular. No gallop. No JVD. No pericardial friction rub. PMI is nondisplaced.

Abdomen: Soft, nontender. No palpable mass. No palpable hepatosplenomegaly. No rebound tenderness, guarding or rigidity.

Bowel sounds are normoactive.

Extremities: No lower extremity edema. No calf tenderness. No swollen, inflamed or deformed joints.

Integumentary: No skin rash. Normal skin turgor. No skin lesions.

CNS: Alert and oriented to time place and person. No focal motor deficit. No focal sensory deficit.

Attending Physician: KOSKENOJA, VIKTORIA L.		Created By: GEBREGEORGIS, WIHIB A.	

-ferritin 259

-lactic acid 1.0

EKG:

-I reviewed 12 EKG tracings, sinus tachycardia, rate of 124 beats per minute, no ST elevation or depression.

Imaging:

## CHEST X-RAY IMPRESSION:

Low lung volumes with bibasilar opacity possibly representing atelectasis or interstitial infiltrate. Viral pneumonitis can have this appearance in the right clinical setting. Please correlate with patient lab values.

Old records reviewed: NO RELEVANT RECORDS AVAILABLE

Assessment and plan:

## 1. Acute respiratory failure with hypoxia:

-due to COVID-19

-however his hypoxia and tachycardia is out of proportion of his chest x-ray appearance and pulmonary embolism is in the differential diagnosis specially given his associated tachycardia and elevated troponin. I have asked the referring emergency room physician assistant Mike White to order CT chest PE protocol and he will be ordering that.

oxygen support as needed, wean as tolerated

## 2. COVID-19:

-oxygen support as needed, wean as tolerated

-discussed risks and benefits of dexamethasone, Remdesivir and convalescent plasma and patient understood and consented to all three. Order dexamethasone 6 milligrams IV daily, Remdesivir 200 milligram IV day one followed by 100 milligram IV daily for five days and 1 unit of convalescent plasma

-I provided the patient with Remdesivir fact sheet, discussed it with him and informed him that this is not an approved drug and it is authorized for use under EUA, he verbalized understanding and consented to it

## 3. Asthma:

-will give albuterol as needed, scheduled Breo Ellipta and schedule Incruse Ellipta

FINAL (SIGNED)

Attending Physician: KOSKENOJA, VIKTORIA L.	Created By: GEBREGEORGIS, WIHIB A.	Date of Service: 10/14/2020	

## 4. Elevated troponin:

- given associated hypoxia and tachycardia, will obtain CT chest to rule out PE
- will trend troponin
- will start him on aspirin
- has pleuritic chest pain and no EKG changes. Picture not consistent with acute coronary syndrome.

## 5. Hyponatremia:

- mild
- will monitor

Prophylaxis: Lovenox and sequential compression devices.

Disposition: Inpatient status due to risk of death, anticipate more than two midnight hospital stay.

**HOSPITAL COURSE**DATE OF ADMISSION:  
10/14/2020

BRIEF HISTORY OF PRESENTING ILLNESS: (Taken from progress note October 15, 2020)

30-year-old male with a past medical history significant for asthma who presents due to complaints of shortness of breath, cough, fevers, loss of smell, and having tested positive for coronavirus on 10/09/2020 with symptoms having started on approximately 10/07/2020.

In the ED, patient found to be febrile with a temperature 100.1° and he was also tachycardic in the 130s. Oxygen saturation was found to be 84% on room air requiring 4 L to maintain oxygen saturation 96%. Labs obtained and remarkable for a white blood cell count of 6.5, platelet count of 109, CPK 577, LDH of 622, CRP of 10, troponin I of 0.004, blood gas with pH of 7.40, pCO2 30, bicarb 25. Imaging done in the form of a chest x-ray which revealed bilateral opacities concerning for interstitial infiltrate. Patient was thought to warrant admission to the hospital.

**HOSPITAL COURSE:**

The patient was admitted to the hospital and was placed on Remdesivir therapy, convalescent plasma, and IV steroids. Patient required the full course of Remdesivir treatment before he finally was saturating well on room air. Currently he is saturating well on room air at rest and with ambulation. He is now being discharged back to prison in stable condition.

The patient did have a mildly elevated troponin I on presentation. He denied any chest pain. Further cardiac risk stratification in the outpatient setting.

**CONSULTATIONS:**

None

Attending Physician: STEELE, JOSEPH A.		Created By: STEELE, JOSEPH A.	
Date of Service: 10/19/2020			

PROCEDURES:  
None

## IMAGING STUDIES:

1. Chest x-ray shows evidence of bilateral basilar interstitial infiltrates.
2. CT PE study shows no evidence of PE in the central pulmonary vessels. Extensive bilateral consolidations mainly in the lower lobes and posteriorly.

## MICROBIOLOGY/PERTINENT LABS:

1. SARS CoV2 swab, 10/09/2020, positive

## DISCHARGE PHYSICAL EXAM:

Vital signs within normal limits on room air  
 Heart sounds are unremarkable  
 Lung sounds are clear

DISCHARGE ACTIVITY: As tolerated. The patient should continue in isolation. Given that it has been at least 10 days since onset of symptoms, isolation can be discontinued as long as his symptoms have resolved

DISCHARGE DIET: Regular

Patient Name: LAFORD , ALFRED  
MRN: 2248703

Patient Demographics at time of original report: LAFORD , ALFRED (MRN: 0002248703)

ADMIT DIAGNOSIS: COVID POSITIVE  
CLINICAL HISTORY:

30 years Male hypoxia with elevated troponin. Covid positive...

#### COMPARISON:

Chest x-ray from today.

#### TECHNIQUE:

Axial images with 79 mL of Isovue-370. MIP reconstruction.. This exam was performed according to our departmental dose-optimization program, which includes automated exposure control, adjustment of the mA and/or kV according to patient size and/or use of iterative reconstruction technique.

#### FINDINGS:

Normal size main pulmonary artery. No evidence for central pulmonary embolus. Peripheral vessels not optimally evaluated because of surrounding extensive infiltrates. Aorta is unremarkable. Borderline heart size. No suspicious mediastinal adenopathy or pericardial effusion. Extensive bilateral lower lobe consolidations. Additional subtle groundglass opacities. No evidence for pleural disease. No suspicious bony lesions.

Limited images of the upper abdomen are unremarkable.

Generated On: 10/20/2020 08:50

## IMPRESSION:

1. No evidence for central pulmonary embolus. Peripheral vessels not optimally evaluated.
2. Extensive bilateral consolidations mainly lower lobes and mainly posteriorly. Findings are compatible with the clinical diagnosis of covid pneumonia. Other etiologies are not excluded.

DIA 0600 - XR CHEST 1 VW BEDSIDE:  
DOS: Oct 14 2020 2:49PM

EXAM DESCRIPTION: XR CHEST 1 VW BEDSIDE

CLINICAL HISTORY: Infection.

COMPARISON: There is no previous study for comparison.

TECHNIQUE: AP upright radiograph of the chest was obtained portably at  
1430 hours.

FINDINGS:  
There are low lung volumes. Patchy opacification at the lung bases may  
reflect atelectasis or interstitial infiltrate. Viral pneumonitis not  
excluded. No coalescent opacity. Upper lung fields are clear. No sizable  
pleural effusion or pneumothorax. Osseous structures are grossly  
unremarkable.

IMPRESSION:  
Low lung volumes with bibasilar opacity possibly representing atelectasis  
or interstitial infiltrate. Viral pneumonitis can have this appearance in  
the right clinical setting. Please correlate with patient lab values.

## RESULTS SUMMARY

COVID-19

Positive

• COVID-19

## POSITIVE TEST INTERPRETATION

COVID-19 - Positive

POSITIVE: 2019 Novel Coronavirus (SARS-CoV-2) by PCR.

Updated information and guidance on the coronavirus disease 2019 (COVID-19) caused by the SARS-CoV-2 virus is available at: [www.cdc.gov/coronavirus](http://www.cdc.gov/coronavirus)

## METHODS AND LIMITATIONS

Nucleic acids are isolated from the sample and RT-qPCR assays detect SARS-CoV-2 (COVID-19) at analytical sensitivity and specificity >99%. The RT-qPCR data is interpreted as negative if no viral markers are detected and all controls perform as expected, including the exogenous extraction control for that sample. The data is interpreted as positive if two of three viral markers are detected and controls perform as expected. The detected presence or absence of virus is reported.

Absence of detection does not imply the absence of other pathogens. Absence of detection does not exclude the possibility that the target sequence is present below the limit of detection.

This test was developed and its performance characteristics determined by NxGen MDx. This test has not been cleared or approved by the U.S. Food and Drug Administration (FDA). However, the FDA has determined that such a clearance or approval is not necessary. FDA does not require this test to go through premarket FDA review. This test is used for clinical purposes. It should not be regarded as investigational or for research. The laboratory is certified under CLIA as qualified to perform high complexity clinical laboratory testing. This test was performed at NxGen MDx, located at 801 Broadway Suite 203, Grand Rapids, Michigan-49504. CLIA Number: 23D2059943.

For updated information, refer to the Center for Disease Control website: [www.cdc.gov/coronavirus](http://www.cdc.gov/coronavirus). Patient fact sheets with additional information about this test are available at [www.nxgenmdx.com](http://www.nxgenmdx.com) or contact [info@nxgenmdx.com](mailto:info@nxgenmdx.com).

## COVID-19 sickens hundreds of prisoners, staff in northern Michigan

ANGIE JACKSON | DETROIT FREE PRESS | 9:53 am EDT October 26, 2020

The novel coronavirus has torn through a prison in Marquette, infecting 75% of the more than 1,000 men housed there since the pandemic started in March.

(A)

And 42% of the 327 employees at Marquette Branch Prison in the Upper Peninsula had tested positive for COVID-19 as of Friday. A recent surge in infections led to a staffing shortage so dire that the Michigan Department of Corrections brought in employees from other prisons and transferred more than 200 Marquette prisoners to another facility.

Of the 618 men who remained housed at the prison as of Thursday, all but 45 had caught the virus, according to corrections spokesman Chris Gautz. More than 450 cases were considered active infections as of Friday. In total, 778 prisoners at Marquette have tested positive.

Gautz said in an Oct. 13 interview that the facility had a “good handle” on the outbreak after restricting prisoners’ movements and designating staff to either the minimum or maximum security housing units in an attempt to contain the virus.

The prison has since reported more than 600 new infections among prisoners and staff.

“It’s just a mess in here,” said Deangelo Anthony, 31, who is incarcerated at Marquette and shared a plea for help in a recording provided by his mother. He tested positive earlier this month. “ ... they messed up big time. They understand it, they coming around telling us that they messed up, but they not trying to do anything to help the matter and better our conditions.”

The situation in Marquette comes on the heels of another major outbreak at Muskegon Correctional Facility in west Michigan, where 78% of prisoners contracted the virus in the late summer — a situation officials say could have been handled better.

All of Michigan’s 29 state prisons have seen at least one COVID-19 case among prisoners or staff. The department reported 6,598 prisoner infections and 779 staff cases across the state as of Friday.

Nationwide, at least 152,955 prisoners and 34,188 staff at state and federal prisons have tested positive since the pandemic began, according to data tracked by the nonprofit newsroom The Marshall Project. Michigan ranks ninth for prisoner cases per capita.

Dr. Josiah Rich, professor of medicine and epidemiology at Brown University, said correctional facilities can't combat the virus if they don't lower their populations and take steps such as enforcing that prisoners and staff wear masks.

"If you can't do physical distancing, then how are you going to stop transmission? If you don't have good ventilation systems, if your (correctional) systems are over crowded,

how do you do it? Well, you don't," said Rich, who is director of the Center for Prisoner Health and Human Rights at The Miriam Hospital in Rhode Island. "And you're going to have repeated outbreaks and repeated spread."

## **'Almost impossible' to avoid virus**

The outbreak at Marquette Branch Prison began in early September with cases among staff, Gautz said.

Marquette housed 840 prisoners at the start of the outbreak but has since transferred more than a quarter of its population — minimum security prisoners — to Newberry Correctional Facility to alleviate the staffing shortage, Gautz said. At the worst point, 141 employees were off work at once, either because they'd tested positive or were a close contact of a co-worker confirmed to have the virus.

Staffing levels are improving as employees return to work from quarantine and staff from elsewhere assist temporarily, said Byron Osborn, president of the Michigan Corrections Organization, which represents 6,000 corrections officers. Gautz said 99 employees were not eligible to work Thursday, but more were expected back in the coming days.

**More: COVID-19 cases among Marquette prison staff double in one day**

**More: Prison housing unit 'completely destroyed' in what union president calls a riot**

With 136 infections as of Friday, Marquette has by far the most staff cases of the state's

"There haven't been instances we've been aware of where anybody required hospitalization, whether it's staff or prisoners," he said of Marquette.

The majority of prisoners currently incarcerated at Marquette are those deemed the highest security risk. Their security level prevents them from being moved to the part of the prison that held the minimum security prisoners transferred to Newberry, Gautz said.

They're housed in single-person cells with open bars. Prisoners weren't moved to new cells according to their coronavirus test results, Gautz said. He said they leave their cells for showers and yard time with cohorts of other prisoners who are also either negative or positive.

Gautz said prisoners can't see or touch people in the cells next to them, but Jerry Anderson, a man incarcerated at Marquette, said that's not the case.

Anderson, 29, who tested positive, wrote the following in a message sent through the prison email system: "the cells here are open bars like you see in the old prison movies, this prison was built in like 1889 and the cells are not 6 feet apart so I can't social distance. if we wanted to reach out and touch hands we could."

Autumn Thomas of Seattle said her brother described to her how he could hear men coughing in nearby cells.

He was among more than 100 prisoners transferred to Marquette in September after a disturbance at Chippewa Correctional Facility, where prisoners took control of a housing unit. His first test at Marquette came back negative. A subsequent test confirmed he had COVID-19, Thomas said.

She said it seemed "almost impossible" for her brother to avoid contracting the virus while sick people were housed in nearby cells. Thomas thinks prisoners with COVID-19 should have been quarantined in a separate area of the facility.

"If there's not space currently, then they need to figure out where they can create the space. It is their fault if people die," she said.

Seventy-four prisoners and three staff across the state have died of COVID-19 since late March. None have been from Marquette.

## Things 'could've been done better'

The proportion of prisoners sickened by COVID-19 at Marquette is the second highest in the state after Muskegon Correctional Facility, where cases surged in the second half of the summer and claimed the lives of five prisoners.

As of Friday, 1,004 Muskegon prisoners — 78% of the population — had tested positive. Active cases have tapered off to three infections.

Men incarcerated there sounded the alarm as the virus spread in August. The Free Press previously reported that prisoners alleged the facility was mishandling the outbreak. They complained that in some instances, the prison allowed positive prisoners to mix with the general population. People who tested negative said they were moved into cells that previously held positive prisoners and had not been cleaned.

Gautz acknowledged there were things "that could've been done better" at Muskegon. He referred to the issues as small mistakes that if handled differently would have "eliminated some of the confusion."

He said a prisoner whose bunkmate tested positive was moved to a housing unit established for prisoners confirmed to have the virus before his own results came back.

In another instance, prisoners who tested negative for COVID-19 were moved to a housing unit as positive prisoners were getting ready to move out. It happened around count time, during which movement is halted, and so the two groups ended being in the unit at once.

"It wasn't a very long time," Gautz said, "but still, it shouldn't have happened."

The department required prisons to create a COVID-19 plan in March. Asked whether officials at Muskegon Correctional Facility were caught off guard by the outbreak several months into the pandemic, Gautz said, "I don't know if that's too strong. There were certainly issues there. ... The number (of cases) speaks for itself that there was a higher rate there and certainly would show there were issues there that needed to be addressed."

Martell Harper, 30, who is incarcerated at Muskegon and contracted COVID-19, said he thinks the prison should have acted faster in shutting down operations and restricting prisoners' movements when the first cases cropped up.

"You know it was inevitable for it to enter the facility," he said. "It seemed like once it hit, they were flying by the seat of their pants trying to figure it out."
